-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 16-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tayside (EP 1,254,645) in view of Kuhlman (DE 597,472). The reference to Tayside discloses the recited insert formed as an insert where at least two helical extending formations 12 extend in from an insert 11, and such is used as an insert into a blood vessel such as grafts and stents, or used in other fields for other fluids, such can be biodegradable, can be formed either as a separate insert or as ribs formed in the wall of the tube, such is used for blood flow and the spiral ribs impart a spiral flow, and where the dimensions can be varied to meet the needs of the user. The reference to Tayside discloses all of the recited structure with the exception of the specific percentage extension of the rib into the flow path including 50%. The reference to Kuhlmann discloses the recited helical formation "a" defining a helix where such extends into the interior of the pipe "b" by at least 50%. It would have been obvious to one skilled in the art to modify the ribs in Tayside to be of any size as set forth in Tayside, where the teachings of Kuhlmann discloses that it is old and known to form such ribs of 50% extension into the conduit to control flow as such is a known percentage extension of an equivalent structure in an equivalent use, where one skilled in the art would only require

routine skill in the art to arrive at optimum values as suggested by Tayside and taught by Kuhlmann and would expect such to function.

***Response to Arguments***

Applicant's arguments with respect to claims 16-27 have been considered but are moot in view of the new ground(s) of rejection.
